

REXMAT 17 brushes

Recommended for...

high LEVEL OF TRANSIT

- medium-sized companies
- supermarkets

TRAFFIC

- pedestrian
- wheel chairs

AREA

- outdoor roofed
- outdoor

TYPE OF DIRT

- coarse ★★★★★
- fine ★★★
- moisture ★

Brush upper infill is only available in black

Brushes colours

rexmat

Highlights (I)

A good entrance mat must retain as much dirt as possible from footwear, without becoming saturated in the short term with dust or moisture. REXMAT is an entrance mat that is composed of aluminium profiles in which a cleaning element has been inserted. Its principle of action is as follows: dust particles, small stones, and moisture are detached from the footwear, and get deposited between the profiles of the mat. In this way they are trapped, so that the next visitor will not drag them inside. Every so often it will suffice to simply roll up the mat and remove the captured dirt accumulated in the matwell in which it is housed.

REXMAT is supplied completely finished and does not require any type of installation or adjustment, it only has to be housed in its matwell (recessed), in this way

- dirt accumulated between profiles since last cleaning can be easily removed, matwell acts as a collector tank
- matwell keeps the mat still, otherwise it would be moved by footfall
- matwell ensures that mat surface is flush with the surrounding floor, this prevents people from tripping

Its main feature is that aluminium profiles are joined together by a high strength PVC joint allowing the mat to be rolled up in order to make its handling easier or to perform periodic removal of the dirt

Moreover, it is perforated, to allow dirt and moisture to pass through

Preventing metallic noises from coming up when being stepped on is a must for every mat of its kind. PVC joint not only acts as a profile connection system but also performs the function of acoustic isolation system, which reduces manufacture costs by "killing two birds with one stone"

rexmat

Highlights (II)

We have all the necessary cutting machinery for the manufacture of mats of any size and shape, however complex they may be

For the manufacture of any mat with a non-rectangular shape there are two alternatives:

- from a blueprint made by a CAD / CAM programme
- by means of a template taken in situ, cutting a rigid material (for example, a piece of PVC flooring, or carpet) in the shape of the matwell

- Aluminium L-shaped profile for construction of built-in matwell frame. It is optional, its placement is not essential
- It is reversible (unequal sides), in one position it is valid for REXMAT 17, and in the other it is valid for REXMAT 22
 - Available in 3-metre strips. It is supplied in its original format, or in already mitred sections, completely finished, and with the necessary connecting pieces (corner joint or straight joint). In this way, at the installation point it will only be necessary to join the sections and to tighten the Allen screws that are built into the connecting pieces
 - Designed to be grouted with mortar

Technical specifications

Aluminium profile

Composition: 6063 aluminium alloy with T5 treatment
Weight: 281 grammes / linear meter

Joint between profiles

Composition: Plasticised PVC of SHORE A95 hardness
Weight: 80 grammes / linear meter
Drainage perforations: 6x22 mm
Distance between perforations: 22mm

Brush upper insert

Base composition: Polypropylene
Brushes composition: Polyamide 6
Weight: 150 grammes / linear meter
